

ANURADHA DOLAMULLA

Aspiring Full-Stack Software Engineer | Secure Authentication & Real-Time Systems

Galle, Sri Lanka | +94 70 691 1402 | anuradhawork123@gmail.com

[GitHub](#) | [LinkedIn](#) | [Portfolio](#)

PROFILE

Third-year BSc (Hons) Information Technology undergraduate at SLIIT with hands-on experience building 15+ full-stack applications across Java/Spring Boot and MERN stacks. Proficient in REST API design, relational and NoSQL database integration, real-time systems (WebSocket, Socket.IO), and secure authentication (JWT, OAuth2, OTP). Comfortable owning a feature end-to-end — from database schema to UI — as a Full-Stack or Backend Software Engineering intern.

EDUCATION

BSc (Hons) in Information Technology

2023 – Present

Sri Lanka Institute of Information Technology (SLIIT), Malabe — Specialization: Information Technology

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, PHP, SQL

Backend: Spring Boot, Node.js, Express.js, REST APIs

Databases: PostgreSQL, MySQL, MongoDB

Frontend: React, Next.js, HTML, CSS, Tailwind CSS

Security & Auth: Spring Security, JWT, OAuth2, OTP, BCrypt, HTTP-only Cookies

Stacks, Real-Time & Tools: MERN Stack, WebSocket/STOMP, Socket.IO, Git, GitHub, Postman

SELECTED PROJECTS

SafeLanka — Civic Safety Reporting Platform 2026

Full-stack platform for submitting safety reports and publishing administrator-verified public alerts.

- Architected a role-based authentication and authorization system (JWT + Prisma) supporting citizen and administrator workflows across 5 core modules, including report review, public alerts, and map-based locations.
- Built modular Next.js API routes with Prisma-backed data access, cutting redundant query logic across reports, users, and alerts endpoints.
- Delivered a responsive reporting flow connecting citizen submissions with verified public safety information, including file uploads and geolocation tagging.

Technologies: Next.js, TypeScript, Prisma, PostgreSQL, JWT

Repository: github.com/Anuradha-dol/civicsafe-lanka

AgroLink Hub — Social Commerce Platform 2026

Multi-role platform combining a social feed with agricultural marketplace and order workflows.

- Developed a multi-role marketplace (listings, cart, orders, seller pages, reviews, chat, moderation, admin ops) supporting distinct buyer, seller, and admin permission tiers via Spring Security RBAC.
- Implemented WebSocket/STOMP-based notifications for real-time order and chat updates across the platform.
- Unified social interaction and commerce features into a single multi-role experience, reducing navigation overhead between browsing, chatting, and purchasing flows.

Technologies: Spring Boot, React, PostgreSQL, Spring Security, JWT, OAuth2, WebSocket/STOMP

Repository: github.com/Anuradha-dol/agrolink-hub-social-commerce-platform

Smart Campus Operations Hub Team Project • 2026

Campus platform for facilities, assets, bookings, authentication, and notifications.

- Owned the authentication, authorization, and notification modules within a multi-developer team project, integrating with facilities, asset, and booking workflows built by teammates.
- Implemented domain-restricted Google OAuth2, JWT cookie authentication, OTP verification, and password recovery, hardening account access against unauthorized sign-ins.

- Delivered real-time alerts via WebSocket/STOMP, keeping facility and booking status updates synchronized across users without manual refresh.

Technologies: Spring Boot, React, MySQL, Spring Security, JWT, OAuth2, WebSocket/STOMP

PulseChat — Secure Real-Time Chat Application 2026

Secure chat application supporting private and group communication with real-time user activity.

- Engineered a token-refresh authentication flow (JWT access/refresh + HTTP-only cookies + email OTP) maintaining persistent secure sessions across all protected routes without exposing tokens to client-side JS.
- Implemented real-time presence, typing indicators, message-seen status, replies, and media uploads via WebSocket/STOMP for sub-second conversational feedback.
- Managed client-side authentication and conversation state with Redux Toolkit, ensuring predictable state updates during high-frequency real-time events.

Technologies: Spring Boot, React, PostgreSQL, Redux Toolkit, JWT, WebSocket/STOMP

Repository: github.com/Anuradha-dol/springboot-react-realtime-chat

Bondly — Social Media Web Application 2026

Full-stack social platform with content interactions, user connections, and administration features.

- Built end-to-end content and social features — profiles, posts, reactions, comments, replies, shares, follow flows, and reviews — backed by a normalized PostgreSQL schema.
- Implemented JWT authentication with email OTP verification and Server-Sent Events for live in-app notifications, removing the need for client-side polling.
- Delivered a dedicated admin dashboard for content and account moderation, separating user-facing and administrative interfaces.

Technologies: Spring Boot, React, PostgreSQL, JWT, Email OTP, Server-Sent Events

Repository: github.com/Anuradha-dol/springboot-react-bondly-social-media-app

ChatSphere — MERN Real-Time Chat Application 2026

MERN application for secure one-to-one and group messaging with real-time user activity.

- Implemented JWT authentication with HTTP-only cookie sessions across private and group messaging channels, including live online-status tracking.
- Integrated Socket.IO for real-time bidirectional messaging and Cloudinary for media delivery, supporting fast, reliable conversation and media loading across sessions.
- Built responsive desktop and mobile interfaces with theme customization and profile management for a consistent cross-device experience.

Technologies: MongoDB, Express.js, React, Node.js, Socket.IO, JWT, Cloudinary
