Description:

In Sri Lanka, the main public transport system is buses, but passengers often face difficulties knowing the exact arrival time. **Catch My Bus** is a mobile app designed to solve this problem by allowing passengers to track both CTB (government) and private buses in real-time.

Bus drivers register their bus details and share live location updates through the app. Passengers can see the estimated arrival times of buses near their location, helping them plan their journeys better and arrive at work, school, or other destinations on time.

This app makes bus travel more reliable, convenient, and stress-free for everyday Sri Lankan commuters

Key Features:

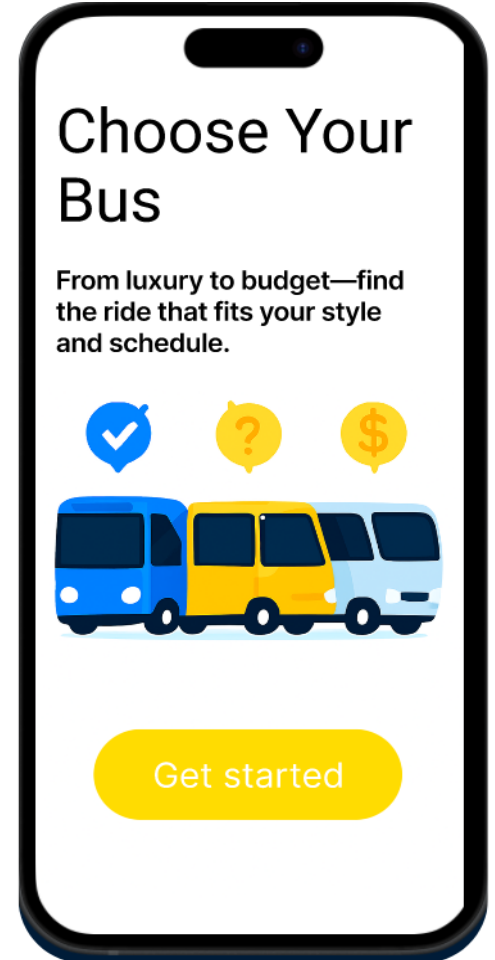

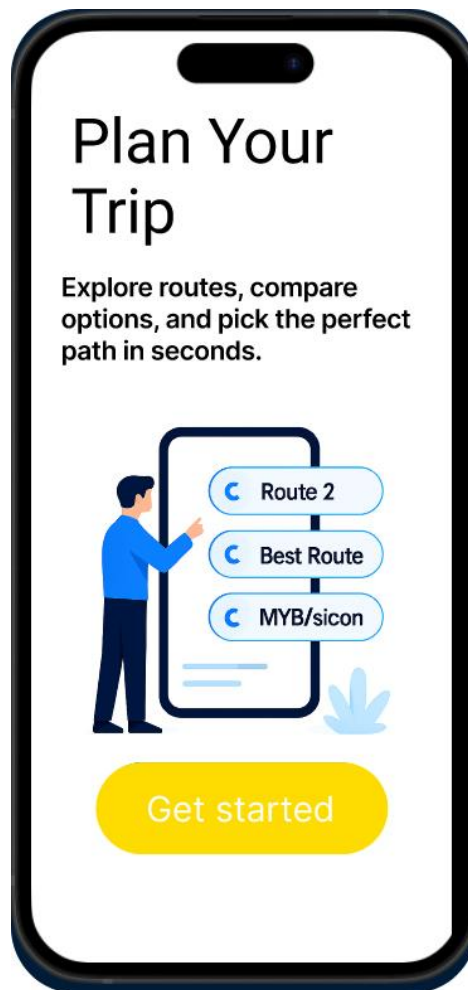

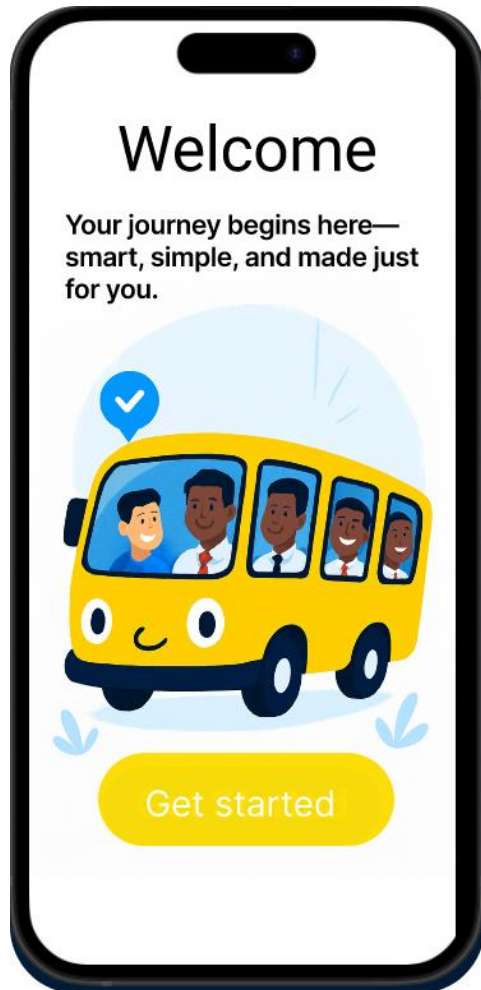

- Real-time Bus Tracking on a map
- Bus details cards (route number, bus type (CTB/Private))
- Route planner (shows best bus options between two points)
- Favorite buses/routes for quick access.
- Route progress updates (bus stops covered, next stop)
- Ticket Pricing Information
- Trip Bus Booking.
